This document describes the updated ChatGPT-hosted implementation. It supersedes the earlier MongoDB/SMTP deployment instructions in the supplied project documents.

1. Sign in and create your profile

Open the live CampusConnect link and select Continue with ChatGPT. Use an account with a Gmail address. After sign-in, enter your full name and choose Student or Professor.

Students choose a unique username containing 3 to 30 letters, numbers or underscores. Professors must first ask Rupam to authorize their email. After profile creation, Open my workspace takes you to My Courses.

On a later visit, sign in using the same ChatGPT identity to reopen the same profile. Use a different account signs out through the platform.

2. Administrator and professor tasks

Administrator

Select Admin on the login page and sign in as drupam1289@gmail.com. Open the admin dashboard to add professor email addresses. Existing professor accounts cannot be removed from the whitelist until their accounts are deleted.

Create a course

Open Manage Courses, select New Course, enter a course name, choose start and end dates, select weekdays and save. The application generates lecture sessions for the schedule.

Enroll students

Open a course roster. Add a registered student by Gmail address, or upload an Excel workbook with an Email column. The result summarizes additions and skipped accounts. Add registered professors as co-instructors where needed.

Projects and analytics

Open Manage Projects to create a listing and review applications. Accept or reject an applicant from your own project. Use Analytics to select a course and view student feedback summaries.

3. Student and community tasks

Your professor must enroll your registered email before a course appears in My Courses. Open the course to view its lecture schedule. Future sessions are shown as locked until their date.

Open a current or past session to read discussions, post a question or reply to a message. Messages update automatically every three seconds. Submit all five feedback ratings and optionally add a comment.

Open Projects to browse opportunities and apply using your roll number, branch, batch, CPI and a valid HTTP or HTTPS resume link. Check your application status after the professor reviews it.

Open Forum to create a categorized post, read comments, reply or vote. Student posts display the chosen username rather than a real name.

4. Profile, sign-out and troubleshooting

Use the avatar menu to update your profile. Hosted password management is handled by ChatGPT. Sign Out ends the platform session.

To delete your app profile, use Delete Account, type DELETE and confirm. The profile is anonymized; public discussion history remains. Professors must first remove owned courses and projects.

If no courses appear, confirm that your professor enrolled the correct Gmail address. If professor signup is blocked, ask the administrator to authorize it. If an action fails, read the error, refresh the page and retry after confirming your sign-in.
